Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Applicant's arguments filed 6/11/08 have been fully considered but they are not persuasive. Previous rejections not addressed below are withdrawn.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 16-20,27-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sato et al (US 5998332) and Koenig et al (WO 01/26469; 04/19/01). Sato et al suggest high concentration (100 to 600 g ae/L, col 6, lines 64-66) glyphosate compositions comprising activity enhancing surfactants (columns 8-10) such as trialkylbetaines (col 10, lines 7-12), alkyletheramines (column 8 lines 65-67), and alkyl glycosides / polyglycosides (col 8, lines 23-24, 48-50), at amounts ranging from 2 to 25% by weight (col 11, lines 1-2), with optional additives such as inorganic salts (col 11, lines 8-10: ammonium sulfate, potassium sulfate, potassium chloride, or sodium sulfate), and additional active agents such as bialaphos and glufosinate (lines 44-56).

Koenig et al suggest a composition comprising isopropylamine salt of glyphosate (abstract, page 2 lines 1-17). Koenig et al suggest the addition of surfactants including betaines derivatives and alkyl glycosides (page 4 lines 1-13). Neither of the prior art references exemplify a composition comprising an isopropylamine salt of glyphosate, trialkylbetaines, alkyletheramines and polyglycosides. However, it would have been

obvious to make the instant composition since the combination of references suggests the composition.

One of ordinary skill in the art would be motivated to combine these references because they disclose components, which are useful for formulating and enhancing the activity of aqueous glyphosate or aminophosphate herbicide compositions.

Other Matters

The WO 04/107861 is not in English, and therefore, WO '861 was not considered.
